Secretary of Health**

## **COVID-19 Variant of Concern (VOC) Case Report Arkansas, 2021**

---

**Week Ending Saturday 10/23/2021**

---

The Arkansas Department of Health (ADH) receives COVID-19 variant reports of a limited number of cases that were sequenced for selected Arkansas residents. The information provided is not the count of all cases due to the COVID-19 Delta variant nor of the counts of all the variants in the state, and are only based on a very small, non-random, convenience sample of cases. Therefore, it is important to understand that this information is not representative of all cases, and does not reflect the overall burden of disease. It is presumed that there are many more people affected than the report shows.

Most of these cases are reported by GISAID and GenBank and identified by ADH staff with assistance from the testing labs. Other data are obtained from [Outbreak.info](https://www.outbreak.info) website.

Due to time lag in getting sequencing results, data are subject to change over time and will be updated as more data become available.

---

**October 25, 2021**

# Cumulative Number of Arkansas Specimens Sequenced as of October 23, 2021

Total Arkansas Sequences = 8,551\* (1.57% Sequenced)

Name, WHO label (First Detected)	AR Sequenced Cases	AR Cumulative Prevalence**	AR Prevalence last 30 days	US Cumulative Prevalence**	US Prevalence last 30 days
B.1.617.2 Delta (India) §	7,582	88%	99.8%	50%	99.8%
Variant Being Monitored (VBM)	969	12%	0.2%	50%	0.2%

\* Data obtained from GISAID

\*\* Data obtained from <https://outbreak.info/situation-reports>

§ Delta B.1.617.2 includes all new Delta mutations

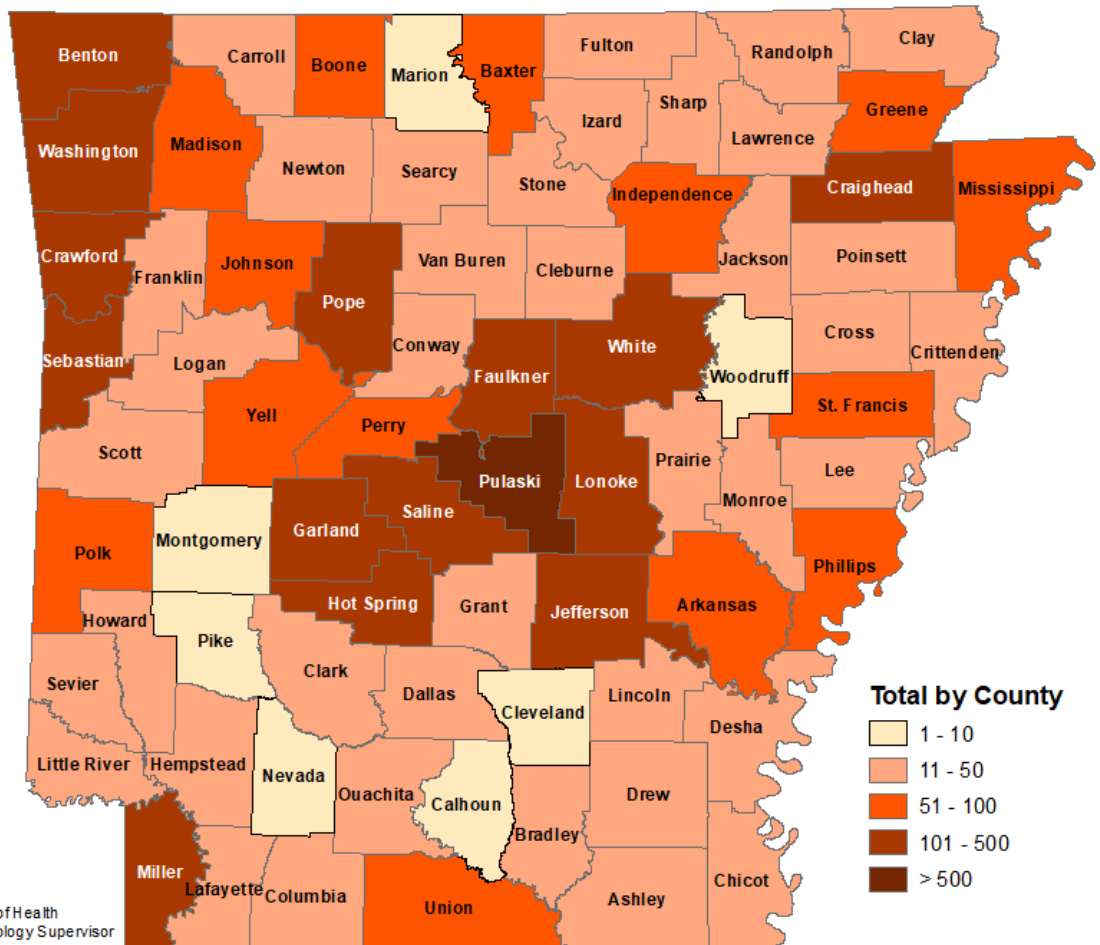

Arkansas Vaccine Breakthrough by Variant and Age Groups

Confirmed COVID-19 Variants by County As of October 23, 2021  
Arkansas Total: 8,551 (1.57%)
